

## PRE PRINTING TIPS

- 1) Recommend use of toner printers where possible as inkjets can add unwanted weight and moisture into the paper.  
Folding and flying paper planes on wet or humid days is not recommended, paper will soften, lose rigidity and make flying poor.
- 2) In print settings, select settings that directs the printer to:
  - 'Print at 100% Scaling' or at 'Actual Size'.
  - Print double sided on long edge.

By doing this it will help ensure folding lines are located accurately on the templates supplied.
